

Does America owe an **APOLOGY** *to its* **CHILDREN?**

*Children eat “fortified” and
“balanced” foods but health declines.*

Surprisingly, modern adult diseases — heart disease, arthritis, cancer, etc. — begin unnoticed in early youth. How can this be when there is food abundance, advanced nutrition and a trillion and a half dollar medical care industry? Even so-called healthy foods don't seem to be making a difference. What's going on?

Research at Wysong proves that both modern medicine and nutrition overlook an essential element to

health. Namely, our modern world may have advanced technologically, but human genetics is programmed to ancient times when food was entirely different.

You can begin today to apply this simple principle to restore your children's and your health. Ask for the FREE one hour CD by Dr. Wysong, “The Thinking Person's Master Key To Health.”
